SKILLS
React, Redux, Javascript, Python, HTML, CSS, SQL, Express, Flask, SQLAlchemy, PostgreSQL

PROJECTS

Your Bnb (React, Redux, Express, PostgreSQL)   live | github
AirBnb clone using Javascript in the frontend and backend
- Implemented a database to manage the spots and reviews
- Contains feature that allow you to Create, Read, Update, and Delete spots
- Contains feature that allow you to Create, Read, and Delete reviews
- One of the biggest challenges faced was understanding my store and using store
- Allowing the user to be able to upload images for their spot was definitely something I was proud of when I first started working on this project

Tunespace (React, Redux, Flask, SQLAlchemy, AWS S3, PostgreSQL)   live | github
Soundcloud clone created with 3 other colleagues using Python in the backend and Javascript in the frontend
- Worked both backend and frontend with my colleagues in both coding and debugging and being able to use AWS to have audio and images
- AWS S3 was used to implement the ability to upload music and change images
- Enjoyed this project mostly because of the teammates I decided to work with
- The team work I demonstrated as well as my teammates was enjoyable and allowed me to feel excited for the future to be able to work on a team with other people

Dumblr (React, Redux, Flask, SQLAlchemy, AWS S3, PostgreSQL)   live | github
Tumblr clone with a theme of The Office using Python in the backend and Javascript in the frontend
- Implemented AWS S3 to upload images when creating post
- Allows features such as Posting, Commenting, Liking, and Following
- Implemented a database to manage the posts, likes, and comments
- Overcame AWS challenges as well as bugs i came across
- I'm proud of the AWS functionality that I implemented. The implementation was a big jump from using the url to upload images in my airbnb to using AWS to upload them
- Decided whether to use Express or Flask was definitely hard. I went with Flask because of how much more i enjoyed working with the database in Flask than Express

EXPERIENCE

Sales Floor Associate

Walmart   Oct 2017 - Oct 2019
- Most of my work consisted of helping customers and keeping my section nice and organized
- Handled answering the phones as well as helping stock merchandise
- Had to juggle multiple responsibilities at the same time

EDUCATION

Web Development - *App Academy | Fall 2022 - winter 2023*
- *Learned Languages Python and Javascript*
- *Created 3 Fullstack Projects while attending App Academy*
- *Gained more self discipline when it came to more work throughout the course*

Computer Science - Long Beach City College | *Winter 2021 - Spring 2022*
- *Decided to go into Computer Science because of my interest in coding discord bots*
- *Took Python in College and C++/ Intro to Computer Science*
